

[BC.NetBarcodeGenerator.All](#)

Overview

BC.NetBarcodeGenerator.All is an advanced .NET library specially designed for .NET programmers to generate 2D & 1D barcodes in various .NET (C#/VB.NET) projects, like .NET Windows Forms, ASP.NET Web, .NET Class Library, Console Application, etc. This .NET library can be easily embedded into your .NET projects for development.

BC.NetBarcodeGenerator.All supports generating QR Code, Data Matrix, PDF417, Code 128, Code 39, EAN-13, EAN-8, GS1-128/EAN-128, UPC-A, UPC-E, Codabar, ITF-14, Planet, Postnet, OneCode/Intelligent Mail, and Interleaved 2 of 5 barcode symbologies.

Limitation

Trial version limitation: the watermark, "BC.Trial", will be displayed on created barcode image randomly.

Integration

The only thing for integration is to add your project reference to BC.NetBarcodeGeneratorTrial.All.dll.

How To

The demo projects included (for ASP.NET and .NET Windows Forms) illustrate how to generate barcodes and output to String, Bitmap object, Stream object, Graphics object, and byte array. If you want to generate barcodes in .NET Windows Forms, ASP.NET Web Forms, and IIS applications, please see [this online guide](#). In the IIS section, we only provide an example for QR Code symbology. So here, we list the examples for all 2D and 1D barcode symbologies.

For Qrcode:
